

Glenview Coin System

A Division of WZ Tool Inc.

Provides Security for Coin Collection

- **For a wide variety of applications**
- **All-metal tamper-resistant locking**
- **Use either locks or security seals**
- **Easy installation and quick emptying**
- **Durable, multi-size fabric**

For over 30 years, Glenview Coin Systems has designed and manufactured the most widely-used coin security collection system in the world. Available for all types of coin-operated equipment, it is highly effective in improving coin handling control and accountability by deterring pilferage and reducing losses due to collection shortages. Plus, its simple yet secure mounting system speeds up the coin collection process and eliminates the transfer of loose coins.

The system is comprised of an all-metal patented locking mechanism attached to a coin bag and an all-metal universal funnel assembly mounted in the coin-operated equipment. The system can be secured with either locks or seals to prevent access to coins by unauthorized personnel and is made from tamper-evident components that provide visual evidence of forced entry. A wide range of various types and sizes of coin containers can be incorporated to meet the needs of any specific application.

The Glenview Coin System is available for simple field installation on existing machines or it can be ordered from all major coin-operated machine manufacturers as an OEM component.

Release the latch on the machine mounted universal funnel assembly that hold the coin bag with the patented locking mechanism.

Slide the coin filled bag out of the funnel assembly. The patented locking mechanism automatically closes when removed, preventing access to coins.

Reinsert an empty coin bag into universal funnel assembly. Locking mechanism on bag will automatically open and latch into place.

In the counting room, the lock or security seal is removed, locking mechanism is opened, bags are emptied, mechanism is reset and locked bags are ready for reuse.
